

**Amendments in the Claims:** (struck-through parts deleted and underlined parts added)

1. (currently amended) A post urination drip collector device for removably positioning over a penis, said device comprising:

5 a tubular member having a first end, a second end and a perimeter wall extending between said first and second ends, said first and second ends being open, a cap member being integrally coupled to and covering said second end such that a housing is defined, said cap member including a peripheral lip being integrally coupled to and extending outwardly away from said second end, said lip being orientated generally perpendicular to said  
10 perimeter wall, a peripheral wall being integrally coupled to and extending away from an outer edge of said peripheral lip, an end wall being integrally attached to and extending along a length of said peripheral wall; and

15 an absorbent material being attached to and substantially covering an inner surface of said cap member.

2. (original) The device of claim 1, wherein said housing comprises an elastomeric material.

20 Claims 3 and 4 (cancelled)

5. (original) The device of claim 1, wherein said absorbent material comprises a cotton material.

25 6. (original) The device of claim 1, further including an elastic band being attached to and extending around an outer surface of said tubular member, said elastic band being positioned generally adjacent to said first end.

30 7. (original) The device of claim 2, further including an elastic band being attached to and extending around an outer surface of said tubular member, said elastic band being positioned generally adjacent to said first end.

## Claim 8 (cancelled)

9. (original) A post urination drip collector device for removably positioning  
5 over a penis, said device comprising:

a tubular member having a first end, a second end and a perimeter wall extending  
between said first and second ends, said first and second ends being open,  
a cap member being integrally coupled to and covering said second end  
such that a housing is defined, said housing comprising an elastomeric  
10 material, said cap member including;

a peripheral lip being integrally coupled to and extending outwardly away  
from said second end, a peripheral wall being integrally coupled to  
and extending away from an outer edge of said peripheral lip, an  
end wall being integrally attached to and extending along a length  
15 of said peripheral wall;

an absorbent material being attached to and substantially covering an inner  
surface of said cap member, said absorbent material comprising a cotton  
material; and

20 an elastic band being attached to and extending around an outer surface of said  
tubular member, said elastic band being positioned generally adjacent to  
said first end.

10. (new) The device of claim 9, wherein said band has a substantially  
rectangular cross-section.
